Terry and Dana

Thank you for your prompt reply. I confirmed with R9 that the only existing pre-existing conditions is unvalidated data from the Navajo Tribe. Also, the spreadsheet does not contain MCLs, but does contain the Method Detection Limit and Reporting Limit. If these will cause confusion, we can modify the file.

Thank you

Chris

Correct. We have not pre-incident values for R9. Messaging should include language on pre-incident. I only had RSLs to go by, but the levels were very low and should be consistent with pre-incident levels.

Again, we are comparing to pre-incident conditions not RSL's yet,

Folks, I have not seen below, why are we comparing to MCL's, it should be pre-incident conditions.

All,

This morning the R6 data was sent to HQ in a excel spreadsheet which contained R6, R8, and R9 data. R9 has developed the attached message that they would like to publish with the R9 surface water data. I have separated out the R9 data from the original file sent this morning.

The R9 data has already been reviewed by Deb and HQ (as part of the larger package). The two files attached are

Surface water data R9 only

Message from R9 to accompany the data

Please process for publication to the EPA Gold King Mine Response Website.

Thank you
